

**How do you do an  
HTTP request  
in Javascript?**

# GET

# Fetch GET request

```
fetch(url).then((response) => {  
  // Do something once HTTP response is received  
});
```

 **Fetch documentation**

# Fetch GET request

Let's use the Star Wars API

```
fetch("https://swapi.co/api/people/")  
  .then(response => response.json())  
  .then((data) => {  
    console.log(data);  
  });
```

# Fetch GET request

```
<ul id="people"></ul>
```

```
const people = document.getElementById("people");
```

```
fetch("https://swapi.co/api/people/")  
  .then(response => response.json())  
  .then((data) => {  
    data.results.forEach((person) => {  
      const item = `<li>${person.name}</li>`;   
      people.insertAdjacentHTML("beforeend", item);  
    });  
  });
```

# POST
